No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                              Score

The sequence was isolated from cDNA library, on a plasmid designated pEC212. The plasmid can be used to construct an expression vector which can be used to transform B. megaterium ATCC 35985. Colorado potato beetle larvae treated with a suspension of cultured cells were dead within one week. The protein can be used as pure crystals

       The btl3 gene encodes a 66 kDa crystal protein (the Btl3 protein) which is believed to be the active protein in the crystal toxin (the Btl3 toxin) produced by Bacillus thuringlensis (B.t.) tenebrionis and B.t. Sl. The patent is for a transformed plant cell which includes, inserted in its genome, the btl3 gene, or a fragment which encodes the 66kD crystal protein. Plant cells conts. DNA encoding this protein are protected against Choleoptera. Also new are plants (and their seeds) conts, these cells; a specific DNA sequence of 1760 b; the crystal protein; and microorganisms transformed with the DNA.

A number of these endotoxins have been found to be toxic to Damilinia ovis, the biting louse of sheep. The B.T. isolates which produce these toxins can be grown and the delta endotoxin which is produced can be recovered by standard procedures. The genes encoding these endotoxins can also be transferred to a suitable host via a recombinant vector and the resulting transformants used in methods to control lice.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                           This sequence shows the amino acid sequence of CrylIIA protein. The promoter from the CrylIIA gene sequence was fused to the protein coding region of the CryBII gene (AAQ71027). The recombinant hybrid fusion gene expressed the CryBII crystal protein more efficiently than its native promoter. CryIIB encodes an insecticidal crystal protein isolated from Bacillus thuringiensis var. kurstaki. It produces crystal proteins during sporulation which are specifically toxic to certain orders and species of insects, esp. Lepidopterans. CryIIB can be used in compositions used as environmentally acceptable insecticides. (See also AAR56696 and AAR56698)

The promoter from the CryIIIA gene (AAQ71026) sequence was fused to the protein coding region of the CryBII gene. The recombinant hybrid fusion gene expressed the CryBII crystal protein more efficiently than its native promoter. CryIIB encodes an insecticidal crystal protein isolated from Bacillus thuringiensis var. kurstaki. It produces crystal proteins during sporulation which are specifically toxic to certain orders and species of insects, esp. Lepidopterans. CryIIB can be used in compositions used as environmentally acceptable insecticides. (See also AAR56698)

                                                                                                                                                                                                                                                                                                                                 cc describes new Bacillus thuringlensis Cry3Bb mutant proteins, and comprovides methods for producing them. The B. thuringlensis Cry3Bb cc polypeptide was modified to have improved insecticidal activity or cenhanced insecticidal specificity against a target insect. The cc modification comprises at least one amino acid substitution, addition, corresponding to from about amino acids substitution occurs at a position cc corresponding to from about amino acids 1-365 of the unmodified cry3Bb cc polypeptide, wherein the substitution or deletion occurs at a position cc corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified corresponding to from about amino acids 1-365 of the unmodified cry3Bb cry3Bb cry3Bb corresponding to from about amino acids 1-365 of the unmodified cry3Bb

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The effects of N- and C-terminal deletions (AAR99960) on the toxicity of the Coleopteran toxin (see also AAR99958) of Bacillus thuringiansis var. tenebrionis (B.t.t.) were examined. Mutant genes were expressed in E. coli and the truncated proteins were tested for activity against Colorado potato beetle. All the C-terminal truncations, even of only 4 amino acids (construct 5440), resulted in a loss of activity. The N-terminus of the toxin was more tolerant; a mutant toxin deleted of 76 amino acids (construct 5452) exhibited toxicity. However, a deletion of 99 amino acids (construct 5457) resulted in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Fig 10; 72pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thurlengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands colds have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica virgifera was tested. The ECSO value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 0.78 microgram per millilitre, compared to 2.88 microgram per contect this sequence does not appear in the specification; it was created in formation provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                               Novel Cryllia proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the Cryllia protein of Bacillus thurlengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands clarected towards or located at the molecular apex. The substituted amino acids have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel Cryllia proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, cand can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica confict virgifera was tested. The BC50 value (concentration at which to 50% feeding inhibition is observed) of the present protein was found to be 7.12 microgram per millilitre, compared to 4.04 microgram per content this sequence does not appear in the specification; it was created to information and appear in the specification; it was created content the present information and appear in the specification; it was created content to formation and appear in the specification; it was created content to formation and appear in the specification; it was created content to the present protein and the content of the present protein.
                                                                                                                                                                                                                                                                                                                                                                                                              e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diabrotica virgifera virgifera.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cryIIIA gene; corn rootworm toxicity; CryIIIA protein;

CC Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least 10.0 relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards insects. CC virgifera virgifera was tested, and the present mutant protein was considered to be a "down mutant" for Diabrotica virgifera virgifera. The CC toxicity of the mutant protein for this blabrotica pest was significantly below the toxicity of the native CryIIIA protein.

CC note: this sequence does not appear in the specification; it was created considered the company of the mative CryIIIA protein.

           Novel CryIIIA proteins AAW34811-41 were produced by alanine scanning mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins are located in some of the solvent exposed loops and beta-strands directed towards or located at the molecular apex. The substituted amino calds have a relative solvent accessibility of at least 40%, or are a maximum distance of 3 amino acids away from an amino acid having at least 40% relative solvent accessibility. The novel CryIIIA proteins have an increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, and can be used to combat, or improve plant resistance towards insects. Specifically, the toxicity of the present sequence towards Diabrotica convirgifera virgifera was tested. The EC50 value (concentration at which 50% feeding inhibition is observed) of the present protein was found to be 1.09 microgram per millilitre, compared to 1.21 microgram per compared to 1.21 microgram per millilitre, compared to 1.21 microgram per millilitre, compared to 1.21 microgram per compared to 1.21 micr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC Movel CryIIIA proteins AAW34811-41 were produced by alanine scanning CC mutagenesis of domain II of the CryIIIA protein of Bacillus thuriengensis. All the positions changed to alanine in these proteins CC are located in some of the solvent exposed loops and beta-strands CC directed towards or located at the molecular apex. The substituted amino CC acids have a relative solvent accessibility of at least 40%, or are a CC maximum distance of 3 amino acids away from an amino acid having at least CC 40% relative solvent accessibility. The novel CryIIIA proteins have an CC increased toxicity to Coleopteran insects, e.g. Colorado potato beetle, CC and can be used to combat, or improve plant resistance towards insects. CC Specifically, the toxicity of the present sequence towards plabrotica CC virgifera virgifera was tested. The EC50 value (concentration at which CC 50% feeding inhibition is observed) of the present protein was found to be 11.52 microgram per millilitre, compared to 4.04 microgram per CC millilitre for the wild type CryIIIA protein.
                                                                                                                                                                                                                                                                                                                                                                                                   Best

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                  2564.5

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-09-943-692-2
